**GENERAL ANNOUNCEMENT 2018\_07**  
**JEVIC APPROVED BY BIOSECURITY AUTHORITY FIJI (BAF)**

Dear Stakeholders,

JEVIC have been approved by the Biosecurity Authority of Fiji (BAF) for the mandatory quarantine treatments of vehicles and machinery prior to export from Japan.

This system provides protection from invasive pests and diseases that could damage the vital Fijian agricultural economy. The approved treatments are necessary to ensure pests, such as the Brown Marmorated Stink Bug (BMSB) (*Halyomorpha halys*), do not establish in Fiji.

JEVIC are honored to be part of the initiative to help protect this South Pacific paradise and its people.

As specialists in pre-shipment inspections, JEVIC are also authorised by the Land Transport Authority (LTA) Fiji to conduct the Offshore Vehicle Inspection. This is part of the comprehensive strategy of the LTA in Steering Fiji Safely.

Please contact your nearest JEVIC office for more information.

Regards,  
JEVIC
